

Education

University of Oxford

Jul 2026 - Jan 2027

Master's Thesis

- **Subject:** Dexterous Manipulation via Flow Policies and Sample-Efficient Reinforcement Learning

ETH Zürich (Eidgenössische Technische Hochschule Zürich)

Expected 2027

Master in Robotics, Systems, and Control

- **Average:** 5.18/6.0
- **Coursework:** Robotics, Control, Computer Vision, and Artificial Intelligence.

EPFL (École Polytechnique Fédérale de Lausanne)

Sept 2021 - May 2024

Bachelor in Mechanical Engineering

- **Average:** 5.15/6.0
- **Coursework:** Dynamics and Control Systems, Fluid Mechanics, Solid Mechanics, Material Science.

Experience

ETH Robotics Club - AI Research Engineer

April 2026 - Present

- Humanoid loco-manipulation via Vision-Language-Action models and reinforcement learning fine-tuning.

BMW — Robotics Research Engineer (Internship)

Sept 2025 - March 2026

- Researched demonstration-guided reinforcement learning to fine-tune robotic foundation models.

Master's Projects

Sample-Efficient Dexterous Policy Fine-Tuning via Normalizing Flows (SRL lab)

2026 - Present

- Improving the SERNF pipeline, a sample-efficient off-policy reinforcement learning-based fine-tuning framework leveraging normalizing flows and critic chunking.

Vision-Language Navigation (SCAI lab)

2025

- Instruction-following indoor navigation pipeline using text-conditioned topological maps via cross-modal attention, 3D feature fields, and waypoint prediction for navigation with a monocular frontal camera.

Boosting RL Navigation through Gaussian Splats (RSL lab)

2025

- Reduced inference time of the Gaussian Splatting library [gsplat](#)  by 23% using pruning techniques.

About Me

Passionate about intelligent decision making and robotics, I am exploring physical AI through dexterous manipulation. My research focuses on sample-efficient reinforcement learning applied to flow-based policies, including normalizing flows and few-step flow matching policies. In my spare time, I enjoy producing music and literature.

Skills

Python, C++, C, PyTorch, TensorFlow, ROS, MuJoCo, CUDA, Docker, LeRobot, MATLAB, LabVIEW.

Languages

French (Native), **Greek** (Native), **English** (C1, IELTS), **Dutch** (B2).

Relevant Coursework in ETH

Machine Learning & AI

- Probabilistic Artificial Intelligence, Imitation Learning, Reinforcement Learning, Generative Models (e.g., Diffusion, Flow Matching, Transformer), and Fine-Tuning Techniques (e.g., LoRA, Adapters).

Control & Optimization

- MPC, Robust MPC, Dynamic Programming, and Optimal Control, Planning under Uncertainty.

Robotics Dynamics & Systems

- Robot Kinematics and Dynamics, Legged and Aerial Robots, Motion Planning, and Motion Control.

Computer Vision & Perception

- SFM, COLMAP, SLAM, Deep Learning Architectures (e.g., ResNet, ViT), 3D Gaussian splatting.
